

Proven technology leader with 10+ years driving innovation with data and AI for social impact. Passionate about building cross-functional, high-performing teams that really deliver. Deep technical expertise across data science, AI/ML (LLMs, CNNs, KGs), cloud (Azure, AWS) infrastructure and full-stack development, with a preference towards Python and Typescript.

Experience

Data Consultant

2025–present

COUNT - AGENTIC DATA ANALYTICS PLATFORM

- Overhauled the company's go-to-market data, reducing a database of 30,000 companies and over a million leads to 300 high-quality target accounts and 10,000 leads.
- Built three AI-driven outreach playbooks achieving a 10% response rate against a previous baseline of under 1%.
- Built agentic AI automation systems with human-in-the-loop logic to keep outreach grounded and personalised at scale.

Independent Technical Advisor

2025

027Bio · ONTHEUPPP - BIOTECH & HEALTH TECH STARTUPS (PRE-FUNDING)

- 027Bio (Biotech): Designed software and data architecture for an Oxford University biotech spinout, including a long-term AI roadmap for pharmaceutical library scanning, presenting the technical vision to investors.
- OnTheUppp (Health Tech): Built a PoC LLM-based coaching app with RAG, inter-session memory and guardrail, and designed the product architecture roadmap and ethics framework.

Chief Technology Officer · International Data Consultant

2022–2026

FJELLTOPP - SOCIAL ENTERPRISE & INTERNATIONAL DATA CONSULTANCY

- Transformed a startup consultancy into a profitable agency and growing annual revenue to \$850k within 2 years.
- Spent the final year running both the commercial and technical sides of the business alongside my own project delivery.
- Managed \$1M+ of public health projects with WHO, UNICEF and governments across 50+ countries as primary relationship holder.
- Delivered public health data infrastructure across multiple countries, working within each government's data laws and security requirements across Azure, AWS and on-premises deployments including Zambia.
- Built and led teams of 20+ across organisations and 10+ in dedicated engineering teams, ranging from sole developer to leadership and stakeholder management depending on project needs.
- Drove adoption of international data standards across 14 government departments and NGOs for the Zambia National Research Repository.
- Established code guidelines, CI/CD pipelines and vulnerability management across Fjelltopp's open and internal projects.

International Data Consultant

2022–2024

ECTAD BANGLADESH - PART OF THE UN'S FOOD & AGRICULTURAL ORGANISATION (FAO)

- Brought in to support a national animal health informatics system, with half of users reporting critical issues and confidence in the system low.
- Diagnosed core issues with the inherited codebase and led a substantial rewrite, reducing data failures from over 10% of daily users to under 1% within three months and achieving 99%+ uptime.
- Grew data completeness from 20% to over 87% within 12 months, directly improving the quality of national animal health policy decisions.
- Built and trained a team of local technical consultants to own, administer and develop the system going forward, leaving something sustainable rather than just fixing the immediate problem.

Chief Technology Officer · Founder

2020–2022

GLIFF.AI - MEDTECH AI STARTUP

- Founded gliff.ai to solve a real problem: MedTech AI startups were burning months rebuilding the same privacy and compliance infrastructure.
- Architected a decentralised platform with end-to-end encryption and all processing client-side, so gliff.ai never saw the underlying patient data.
- Built an end-to-end pipeline from clinical data collection through annotation, model training and AI review, with federated learning and split neural networks for privacy-preserving AI.
- Raised over £1M, built a team of 15, and got the platform into the hands of NHS clinicians and Fortune 500 companies within two years.
- Invited speaker on AI ethics at the 2022 Scottish AI Summit and contributor to the Pistoia Alliance's AI/ML Best Practices Toolkit.

Research Fellow · Postdoctoral Researcher

2017–2020

UNIVERSITY OF GLASGOW

- Awarded 2 fully-funded fellowships in biomedical data science, developing smart microscopes for understanding vision in zebrafish.
